SKILLS

BACK END DEVELOPMENT | Java • Python • Spring • Express • NodeJS

MISCELLANEOUS | Machine learning • MongoDB

FRONT END DEVELOPMENT | ReactJS • Redux • JavaScript • Bootstrap • Materialize • HTML • CSS

SOFT SKILLS | Team player • Communication • Deliver results

EXPERIENCE

Weather App with API using Java

- **Weather API Integration:** The program fetches real-time weather data using the Open-Meteo API, including temperature, humidity, windspeed, and weather conditions.
- **Location Search:** Users input a city name, and the app retrieves its latitude and longitude to query weather data.
- **Swing GUI Implementation:** A graphical user interface built with Swing allows users to interact seamlessly.
- **Weather Icons:** Images dynamically change based on the weather condition (e.g., Clear, Cloudy, Rain, Snow).
- **Current Time Indexing:** The app fetches weather data specific to the current hour by matching timestamps.
- **Error Handling:** Basic error handling for invalid user input or failed API connections ensures app stability.

Recipe App

- **Recipe Search Functionality:** Users can search for recipes using the Edamam API, with the default query set to "chicken."
- **Recipe Cards:** Recipes are displayed in visually appealing cards that include images, servings, cuisine type, and health labels.
- **Favorites Management:** Users can favorite/unfavorite recipes, and their preferences are stored in localStorage.
- **Dynamic Skeleton Loading:** Placeholder skeletons are shown while recipes are being fetched.
- **YouTube Links:** Clicking on a recipe image redirects users to a YouTube search for video tutorials on the selected recipe.
- **Reusable Components:** The RecipeCard component is modular and takes dynamic props like bg (background) and badge styles.

EDUCATION

Southwest Petroleum University

Bachelor of Computer Science and Technology

2022 July | Online

GPA: 2.76/4.00

COURSEWORK

CS50 Harvard University

Algorithms Part 1 By Princeton University

BroCode Full Java Course

Code Academy Java Course

FreeCodeCamp Full Stack Course

INTERESTS

Playing guitar • Playing piano • Photography

Real Time Chat App

- **State Management:** Uses **Zustand** to manage authentication, messages, and user states.
- **Socket.io:** Handles real-time updates like new messages and online users.
- **Dynamic UI:** Displays messages, user avatars, and timestamps dynamically using React.
- **MongoDB:** Defines a User schema for storing user data securely.
- **JWT Authentication:** Protects routes with token-based middleware.
- **REST APIs:** Handles user authentication, message retrieval, and updates.
